## Skills

Microsoft Word, Excel, Soldering, Debugging, Troubleshooting
Speak, write, and read fluently in Spanish & English
Hardware: Raspberry Pi 3B, Arduino UNO, and FPGA Design
Hardware and software installation
Self-motivated professional

## Software

Python
C++
C
HTML
CSS
Java
Verilog

*Live Nation Entertainment Inc., San Bernardino, CA*

- Delivered exceptional level of service to each customer by listening to concerns and answering questions.
- Directed ticket holders to seats and facility locations.
- Reviewed tickets for authenticity and applicability to particular event.
- Greeted customers with smile and provided friendly, knowledgeable service.

## Projects

---

### **CSE 208 & 408**

I worked with a group to develop a "Smart Mailbox" which enables the user to keep track of their mail for any sort of activity. Through the use of Firebase we were able to store and upload photos in a quick and efficient manner as well as use the Raspberry Pi 3B to develop an alarm system.

### **Web Scraping to Files**

For this project, I extracted the final standings of the league tables between the 1992/93 - 2020/21 seasons of the English Premier League. I formed clusters of data that were then written into files where you can see the final positions of the teams based on each season.

### **GUI Calculator**

I created a calculator with basic arithmetic such as addition, subtraction, multiplication, and division as well as trigonometric functions such as sin, cos, and tan. The calculator is based on the implementation of eval() function which retrieves and updates any given input rounded to the nearest 4th decimal place.
